

FORT WASHINGTON INTERMEDIATE FIXED INCOME — 2Q2024

PORTFOLIO COMMENTARY

The Fort Washington Intermediate Fixed Income strategy returned 0.70% gross and 0.65% net for the quarter, outperforming the Bloomberg US Aggregate Intermediate Bond Index, which returned 0.46%.

Performance was primarily driven by interest rates, while positive security selection largely offset that rate detractor and the impact from sector allocation was neutral.

Interest rate management had a slightly negative impact on performance during the quarter. The portfolios were managed with tactical duration management, which underperformed over the period.

Security selection had a positive impact on relative returns during the quarter. Credit selection within the Investment Grade Credit sector outperformed the benchmark during the period.

Sector allocation had a neutral impact on relative performance during the quarter. The strategy's overweight positioning to IG Corporates contributed modestly to returns, while the overweight to Securitized Products offset that performance.

MARKET COMMENTARY

The economy has continued to grow at a robust pace throughout the first half of 2024. Healthy job and wage gains, coupled with significant increases in net worth, have supported recent spending as excess savings from pandemic era programs are now largely exhausted. The labor market has become more balanced in recent months and the unemployment rate has moved modestly higher to 4.1% compared to last year's low of 3.4%. While this slowing should put downward pressure on inflation, it could also lead to a larger decline in consumption.

Amid continued strength in the economy and softening in the labor market, inflation has remained volatile and investors have maintained their focus on the Federal Reserve and when the U.S. can expect rate cuts. Forecasts for the path of the Fed Funds rate have varied meaningfully this year and is likely to continue as new economic data is released. Inflation came into the year near the Fed's 2% target on a 6-month basis but upside surprises for the first few months of 2024 sparked concerns around elevated inflation. While inflation worries are still present, recent data has renewed faith that inflation will move lower and the larger trend remains intact. The Fed's preferred gauge of inflation, Core PCE, is at a yearly rate of 2.6%, down from 4.7% last May. While continued progression should increase the Fed's confidence to cut, they have emphasized the desire to move slowly and stay data dependent.

Annualized Total Returns as of June 30, 2024

The market is anticipating 50 basis points of cuts in the second half of the year with consensus forecasts pointing toward continued growth and leading to a 'soft landing.' As a result, risk assets moved higher while interest rates appear to have stabilized following recent inflation reports. The 10-year Treasury initially rose 50 basis points in Q2 following renewed inflation fears, but subsequently reversed much of the move and ended the quarter at 4.40% compared to 4.20% at the start of the quarter. Investment grade corporate spreads widened only a few basis points during the quarter and remain near historically tight levels. Despite the move higher in interest rates and spreads, the Bloomberg US Aggregate Bond Index returned 0.07% for the quarter as carry more than offset the decline in bond prices.

POSITIONING

Risk budget: The strategy is targeting a modest overweight to risk representing 30% of the risk budget.

Economic growth has surprised to the upside over the last year, but downside risks remain elevated from the cumulative effects of the Fed's restrictive monetary policy, tightening bank lending standards, increased geopolitical risks, and uncertainty around the U.S. elections.

Inflation continues to decelerate but remains above the Fed's 2% target. The Fed is expected to begin easing monetary policy later this year as inflation trends toward its target but will remain in restrictive territory for some time. Although the U.S. economy has shown resilience thus far, consumption could slow more than expected as consumer strength faces increased challenges and the labor market continues to cool.

Valuations generally reflect a high probability of a soft/no landing with limited margin of safety. Despite our improved economic outlook, elevated asset prices result in only a modest overweight risk posture within the strategy.

Sectors: Sector positioning reflects generally expensive valuations, relative value, and opportunities within each sector. Allocations were generally unchanged in the quarter and primary risk exposures include:

- ▶ The strategy remains overweight to Investment Grade Credit (IG). Within the IG allocation, the strategy continues to reduce risk as spreads tighten amidst positive sentiment. We are maintaining a risk overweight to select sectors where attractive bottom-up opportunities exist such as media, aerospace/defense, and banks. In addition, the strategy is looking for incremental opportunities to increase liquidity in the event of a spread widening opportunity.
- ▶ Securitized Products remain an overweight exposure relative to the benchmark, focused within AAA-rated non-agency CMBS. In our view, high-quality CMBS that has widened in concert with broader CMBS disruptions from distressed office properties offers attractive relative value.

Rates: We are currently positioning portfolios neutral duration relative to the benchmark with a steepening bias. Portfolios are overweight the intermediate part of the curve and underweight long maturities relative to the index to benefit as the yield curve steepens. Powell has indicated the Fed is prioritizing the larger trend of inflation but needs additional confidence around the trajectory to begin cutting rates. While investors expect this to occur later this year, we expect the market to continue reacting to incoming economic reports which should lead to volatility and present opportunities for tactical adjustments

MACRO OUTLOOK (AS OF 06/30/2024)

Factor	Outlook	Comments
Economic Growth	Neutral	<ul style="list-style-type: none"> • Q1 growth remained robust and consensus expectations for future growth are above trend. • Consumer spending supported by job/wage growth and increased net worth. • Business fundamentals generally healthy but small business sentiment near historical lows. • Progress toward 2% inflation slower than expected but larger disinflationary trend still in place. • Restrictive monetary policy poses downside risks.
Financial Conditions	Neutral	<ul style="list-style-type: none"> • Lending standards remain tight while market-based financial conditions generally neutral. • Volatility to remain elevated as markets react to incoming data and policy response. • Timing/magnitude of cuts remains uncertain, markets currently anticipate 2 cuts in 2024, 4 in 2025.
Valuations	Credit: Neutral	<ul style="list-style-type: none"> • In our view, there is limited upside in credit valuations from current levels as risk/reward is skewed to the downside. Resilience of U.S. consumer has provided support for overall economy, but cumulative effects of rate increases, and depleted excess savings are likely continue weighing on growth.
	Equities: Neutral	<ul style="list-style-type: none"> • Equity valuations have become stretched following strong performance. 2024 earnings expectations may be difficult to achieve with a slowing economy. Although breadth has improved, index performance is narrow and driven by a small number of names.
	Rates: Neutral	<ul style="list-style-type: none"> • Interest rates are likely to remain range-bound until path of Fed actions becomes clearer. Interest rates reflect expectation of moderately slowing growth and cuts in late 2024. The risk for lower rates is a sharper slowing in growth and inflation. Risks for higher rates are stubborn inflation and higher path of Fed policy.
Risk Budget	Summary	

30%

We remain comfortable with a modest allocation to risk assets. Credit valuations are stretched and reflect a high probability of no landing. Even if a broader economic slowdown is avoided, upside is limited from current levels. The primary risk to markets is the impacts of the cumulative effects of tight Fed policy and bank credit standards. Recent inflation figures show slowing progress toward 2% but the larger trend of disinflation should continue as shelter and other non-discretionary categories ease. Market expectations for rate cuts largely align with the Fed's recent forecast, however volatility will likely persist as the market reacts to incoming economic data. Business and consumer fundamentals remain generally healthy. While the labor market is balanced, forward-looking indicators are exhibiting mixed signals. In our view, current valuations amid continued uncertainty supports a modest overweight to risk.

Composite inception date: 01/01/2006 and Composite creation date: 01/01/2018. ¹The 3-Year annualized ex-post standard deviation is calculated using monthly gross-of-fee returns to measure the average deviations of returns from its mean. ²Dispersion is not calculated for years in which the composite contains five portfolios or less. Dispersion is calculated as the equal weighted standard deviation of quarterly gross-of-fee returns for those portfolios held in the composite during the full measurement period. Past performance is not indicative of future results.

Fort Washington's Intermediate Fixed Income strategy seeks to actively manage portfolios within a disciplined sector rotation and target duration framework, focusing on long-term results, utilizing a mix of fixed income securities. Fort Washington constructs portfolios that are diversified by sector, holdings, and quality which we believe will produce favorable risk-adjusted returns. The Intermediate Fixed Income Composite includes all fixed income accounts above \$5 million managed to the maturity constraints consistent to that of an intermediate duration focused index, with the ability to invest in Investment Grade Securities which allow for between 10%-30% allocations to High Yield and/or are restricted to invest in less than 5% in Emerging Market Securities, Non-U.S. Dollar denominated securities, and/or any derivative investments. Effective 10/22/2015, the Intermediate Fixed Income fee is 0.35% for the first \$25 million and 0.30% on additional amounts over \$25 million for separate accounts. The benchmark for this composite is the Bloomberg US Aggregate Intermediate Bond Index. This benchmark covers the USD-denominated, investment grade, fixed-rate, and taxable areas of the bond market. Portfolios in this composite include cash, cash equivalents, investment securities, interest and dividends. Cash is maintained, within each separately managed account segment, in accordance with our asset allocation ratio. The U.S. dollar is the base currency. The specific securities identified and described do not represent all of the securities purchased, sold, or recommended. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. Net of fee performance was calculated using the actual management fees charged. Individual portfolio returns are calculated on a daily valuation basis. Past performance is not indicative of future results. Fort Washington Investment Advisors, Inc. (Fort Washington), a wholly owned subsidiary of The Western and Southern Life Insurance Company, is a registered investment advisor and provides discretionary money management to a broad range of investors, including both institutional and individual investors. RISK DISCLOSURES

The Fort Washington Intermediate Fixed Income strategy invests in fixed-income securities which can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. Events in the U.S. and global financial markets, including actions taken to stimulate or stabilize economic growth may at times result in unusually high market volatility, which could negatively impact strategy performance and cause it to experience illiquidity, shareholder redemptions, or other potentially adverse effects. Banks and financial services companies could suffer losses if interest rates rise or economic conditions deteriorate.
