Composite inception date: 01/01/2006 and Composite creation date: 01/01/2018. The 3-Year annualized ex-post standard deviation is calculated using monthly gross-of-fee returns to measure the average deviations of returns from its mean. "Dispersion is not calculated for years in which the composite contains five portfolios relss. Dispersion is calculated as the equal weighted standard deviation of quartery gross-of-fee returns to those portfolios held in the composite during the full measurement period. Past performance is not indicative of future results. The benchmark for this composite is the Bloomberg US Aggregate Intermediate Bond Index. The Bloomberg US Aggregate Intermediate Bond Index measures the performance of the investment grade, fixed-rate taxable bond market and includes government and corporate bonds, agency mortgage-backed, asset-backed securities, and commercial mortgage-backed securities (agency and non-agency) with a maturity greater than 1 year and less than 10 years. The index accounts for interest payments by incorporating them into the total return calculation. Fort Washington's Intermediate Fixed Income strategy seeks to actively manage portfolios within a disciplined sector rotation and target duration framework, focusing on long-term results, utilizing a mix of fixed income accounts above \$5MM managed to the maturity constraints consistent to that of an intermediate duration focused index, with the ability to invest in Investment Grade Securities which allow for between 10%-30% allocations to High Yield and/or are restricted to invest in the stand 5% in Emerging Market Securities of the migr fixed income accounts above \$5MM minarily invested in investment grade securities, interest and dividends. ## **RISK DISCLOSURE**

The Fort Washington Intermediate Fixed Income strategy invests in fixed-income securities which can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. Events in the U.S. and global financial markets, including actions taken to stimulate or stabilize economic growth may at times result in unusually high market volatility, which could negatively impact strategy performance and cause it to experience illiquidity, shareholder redemptions, or other potentially adverse effects. Banks and financial services companies could suffer losses if interest rates rise or economic conditions deteriorate.
